

Increase Performance for Your Website and Your Business

Drupal Performance Hosting from Unleashed Technologies

When it comes to website load times, every second counts. A recent study found that 40% of users will abandon a website after waiting just 3 seconds for a page to load. The experts at Unleashed Technologies have developed a cost-effective, optimized hosting environment that will drastically reduce load times for your Drupal sites.

Unleash Your Site's Potential

Drupal is a very powerful content management system (CMS) able to handle large amounts, and many different types, of content. Because of this, Drupal sites often require more memory and CPU resources than other platforms, negatively impacting your site's speed. When hosting your Drupal site with Unleashed Technologies, you will:

- **Improve site speed** – Drupal sites hosted with Unleashed Technologies often load six times faster than those hosted elsewhere thanks to hosting environments custom built for Drupal.
- **Optimize performance** – Get your site audited by Drupal development and hosting experts to enhance performance.
- **Identify a problem before it becomes one** – We're constantly on the lookout for changing resource requirements for Drupal and how those apply to the sites we host, so that issues are caught before they impact your site.

100% Uptime Guaranteed

All performance hosting is from our Tier III+ data center with a guaranteed 100% uptime and 2N + 2 redundant infrastructure with 14 bandwidth carriers, so there are backups to our backups. When you're ready to move to Unleashed Technologies, we work closely with you to seamlessly transfer from your former hosting provider to minimize – or even eliminate – site downtime.

Your Drupal site is always at peak performance with Unleashed Technologies' optimized web hosting.
