

Saving You Time, Money, and Worry

Virtual Private Servers from Unleashed Technologies

All Cloud services are not created alike. When choosing a virtual hosting environment, you want to know that the solution will meet your needs, that you will be able to access your data when you need to, and that everything is secure. At Unleashed Technologies, our expert consultants work closely with you to develop a solution that will deliver the enterprise-class service you require at small business prices. Unleashed Technologies provides you with virtual private servers (VPS) from a SOC 2, Type II, and SOC 3 (SSAE-16) compliant, state-of-the-art, Tier III+ data center.

With Virtual Private Servers from Unleashed Technologies, you will:

- Reduce costs by eliminating hardware expenses and right-sizing usage
- Increase reliability with N+2 redundancy and blended carrier network
- Enhance performance by leveraging the most advanced infrastructure technologies from VMware, Microsoft, Dell, and more
- Ensure security with a 24x7x365 staffed NOC, including biometric scanning and video surveillance
- Improve business continuity with full disaster recovery contingency planning (DRCP)
- Easily scale so that you can grow your business without the headache of moving your servers
- Have access to experts who can help you with your technical questions and server needs

In some virtual environments, performance is shaky and support is limited – impacting uptime and your ability to do business. Unleashed Technologies offers what other providers don't – the services of twelve carriers blended for seamless failover should an interruption occur. This blended service, coupled with N+2 redundancy, enables us to guarantee a 99.999% uptime so that server failures are a thing of the past.

Unleashed Technologies' virtual private servers provide you with superior stability and support, including guaranteed SLA's, to ensure that your business continues to run smoothly.
